PROFESSIONAL SUMMARY

Web accessibility analyst with multi-year experience auditing hundreds of digital platforms against WCAG 2.1, backed by a Computer Science degree that lets me read the underlying HTML, CSS, and ARIA to pinpoint the source of each defect. Test manually and with automated tools across screen readers (NVDA, JAWS), keyboards, and browser dev tools on macOS, Windows, iOS, and Android, documenting every finding with a clear, actionable remediation developers can act on. Also a full-stack builder who ships web and AI applications end to end. Conformance is only real once the fix ships.

EXPERIENCE

Web Accessibility Tester (Intern) **Apr 2024 to May 2026**

Miami University, IT Services *Oxford, OH*

- Audited hundreds of digital platforms, websites, and pieces of content against WCAG 2.1 A/AA, combining manual testing with automated scanners; major enterprise platforms tested include Workday, Zoom, Slack, Webex, and Handshake.
- Tested across devices and operating systems (macOS, Windows, iOS, Android) using screen readers (NVDA, JAWS), keyboard-only navigation, Axe DevTools, Access Assistant, and browser developer tools to catch issues automated scans alone miss.
- Inspected the underlying HTML, CSS, ARIA, and page structure to trace each defect to its root cause, rather than stopping at what a scanner flagged.
- Documented every finding against the applicable WCAG success criteria and paired it with a recommended remediation, producing structured, actionable defect reports developers and IT could act on directly.
- Evaluated and remediated accessibility across document and media formats (Word, PDF, slides, forms, and video), extending conformance beyond web pages to the content users actually receive.
- Trained and onboarded new hires on the accessibility testing process and methodology, and partnered with developers and IT leadership to drive fixes to closure under real security and compliance constraints.

CERTIFICATIONS

Testing with Screen Readers: A User-Flow Case Study, Level Access, 2024

Creating Accessible Documents Using Word, Level Access, 2024

Technology, Ethics, and Global Society, Miami University, 2025

SELECTED PROJECTS

AI Tutor: Full-Stack RAG Platform with LLM Inference Backend

Tech: React, Flask/Python, MySQL, SQLAlchemy, Docker, CI/CD, GitLab, REST APIs, RAG

- Designed and shipped a course-aware AI tutoring platform end to end: Flask/Python REST APIs, a JavaScript/React front end, and MySQL/SQLAlchemy data models, with a retrieval-augmented generation pipeline over course content using embeddings and vector search.
- Engineered the full flow from user query to retrieval to LLM generation to response validation, adding guardrails and an evaluation step that kept answers grounded in source material.
- Containerized services with Docker and gated every change through an automated CI/CD build-and-test pipeline; owned the architecture, schema design, and query optimization end to end.

HOME NEXUS: Real Estate Web Application (Team Lead, 4 engineers)

Tech: HTML, CSS, JavaScript, responsive UI, relational database, front-end/back-end integration

- Led a four-person team building a property-listings platform with search and filtering, dividing tasks, planning the work, and coordinating front-end and back-end development to delivery.
- Built the responsive interface with semantic HTML and CSS, the same standards-based markup discipline that underpins accessible, WCAG-conformant pages.

The ALT Space: Full-Stack Ticketing and Event Platform

Tech: Node.js, Express.js, EJS (server-side rendering), SQLite, HTML/CSS/JavaScript

- Built an event and ticket management system with event creation, ticket booking, check-ins, feedback collection, forms, and an analytics dashboard with CSV export, handling the full request-to-response cycle on a Node/Express stack.

Model Evaluation and Benchmarking Pipeline

Tech: Python, scikit-learn, XGBoost, pandas, NumPy

- Built an automated pipeline benchmarking 7 model architectures on a shared dataset (~94% accuracy), with automated hyperparameter tuning and k-fold cross-validation scored on F1, ROC-AUC, and precision/recall.
- Structured a modular harness so new models plug in through one interface, the same test-and-measure rigor I bring to structured quality review.

NAD v. Netflix: Digital Accessibility Case Study

- Wrote a formal analysis of the landmark captioning case, connecting WCAG conformance to real digital-accessibility compliance obligations, with a visual chronology diagram and formal citations.

SKILLS

Accessibility Testing: WCAG 2.1 A/AA, manual and automated auditing, screen reader testing (NVDA, JAWS), keyboard navigation, focus management, color and contrast checks, cross-platform and cross-device testing (macOS, Windows, iOS, Android), root-cause analysis

Web and Code: HTML, CSS, ARIA, semantic markup, DOM inspection, JavaScript, TypeScript, React, responsive design; Python, Java, C++, SQL, Bash

Tools: Axe DevTools, Access Assistant, browser developer tools, VS Code, Git/GitHub/GitLab, Trello, Kaltura

Documentation and QA: structured defect reporting, remediation guidance, accessible documents (Word, PDF, slides, forms, video), test methodology, training and onboarding, technical writing

EDUCATION

Miami University *Oxford, OH*

Bachelor of Science in Computer Science | Minor: Mathematics **May 2026**

GPA: 3.83, Magna Cum Laude | President's List and Dean's List (six semesters)

Relevant Coursework: Web Application Programming, Software Engineering, Database Systems, Data Structures & Algorithms, Technology Ethics & Global Society
